INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/KR2004/000156

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

. Statement			
Novelty (N)	Claims	1 - 9	YES
	Claims	NONE	NO
Inventive step (IS)	Claims	1-9	YES
	Claims	NONE	NO
Industrial applicability (IA)	Claims	1 - 9	YES
	Claims	NONE	NO NO

- 2. Citations and explanations (Rule 70.7)
 - 1. Reference is made to the following document:

D3: JP 10-182533 A

2. Novelty and Inventive Step

Claim 1 of the present invention relates to a method for producing dimethylether(DME) comprising i)introducing a feed gas mixture containing hydrogen and CO to a DME synthesis to provide a crude product stream containing DME and CO2, ii)separating the crude product stream into a CO2 rich stream and a DME rich stream, iii)introducing the CO2 rich stream to a reverse water gas shift(RWGS) reactor wherein it is reacted with hydrogen in the presence of a catalyst to provide a CO rich stream, and iv)recycling the CO rich stream to step(i).

Document D3, which is considered to represent the most relevant state of the art, discloses the reuse of CO2 gas to be converted back to CO gas in the process of producing DME.

Although D3 relates to a method for reuse of CO2 gas in the process of producing DME, D3 is different from claim 1 of the present invention in that D3 does not suggest any RWGS reactor and oxide catalysts to provide the CO gas stream from a large amount of CO2 gas generated during the manufacturing process of DME. Moreover, the RWGS reactor and the composite oxide catalyst of the present invention are not easily exchangeable or not expectable by those who are skilled in the art.

Therefore, the subject matter of claim 1 is considered to be novel and to involve an inventive step in the sense of PCT Article (2) and (3).

Claims 2-9 of the present invention, which are dependent on claim 1, are also novel and inventive under PCT Article (2) and (3).

3. Industrial Applicability

There is no reason for denying industrial applicability of the present invention under PCT Article 33(4).
